

What HedgeGo can do for you

HedgeGo is a digital tool for industrial companies and asset managers to reduce risks and increase profits for FX exposures. Our purely data-driven prediction system for 30 currency pairs proved successful 90 times out of 100. It enables us to create timely executable action guidelines to get into hedging or hold off from it.

Supporting communication channels like Webinars and published market analysis explain the "Why" behind the "What" and indicate action to responsible FX managers. Additionally, HedgeGo offers tailor-made financial instruments to meet the challenges when dealing with FX exposures.

Bullets

- 22 years of positive track record
- For FX exposures
- Reduces risk
- Increases profit
- Suggests action

Reasons for hedging now

Volatility: Volatility of markets and FX exposures will increase in coming years.

Profit: FX exposures can dramatically influence the profitability of your business models.

Problem resolved: Better performance in FX Exposures

HedgeGo results in a 7% better performance per year compared to similar or No-hedge FX strategies.

Problem resolved: No limited advisory from banks anymore

The analysis of currency developments is a highly specialised activity, which is actively provided by banks for only a few currencies. HedgeGo provides top notch results for 30 major currency pairs.

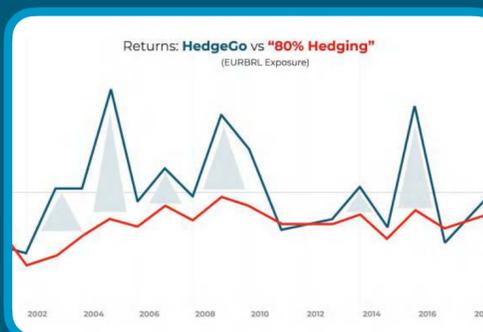

When it comes to currency hedging, it's all about securing your best possible outcome. In doing so, you don't like to be surprised. We support you in this!
